To whom it may concern,

This letter is to verify that a preliminary soil evaluation was performed at 5579 Wilkins Branch Rd. in Williamson Co. The soil on this tract was evaluated for subsurface sewage disposal possibilities to expand the existing bedroom count. A large area of suitable soil was located on the property. The soil was identified as the Hawthorn series with estimated absorption rates of 45-60 minutes per inch. The area appeared to be about 20,000 sq. ft.+. Depending on final soil mapping results, this should be adequate for a 4-5 bedroom septic disposal area. The approximate area is shown on the satellite image provided and marked with orange survey ribbon onsite. **These findings are based on a preliminary evaluation only. Extra high intensity soil mapping, property line and easement locations will be required for final approvals. Only the Williamson County Department of Sewage Disposal has the authority to determine the number of bedrooms and system approvals.** For any questions please contact me at 615-210-5523.

Sincerely,

J. Michael Haarbauer
