

1	Site Class I	5	Site Class V
2	Site Class II	RA	Site Class for Red Alder
3	Site Class III	ND - GP	No Data or Gravel Pits
4	Site Class IV	MFP	Marginal Forest Prod. or Non-Comm. Forest

Site indices are based on the WA-DNR State Soil Survey. If the site index does not exist or indicates red alder, noncommercial, or marginally commercial species, the following apply:

- If red alder is indicated and the whole RMZ width is within that site index, then use site class V. If red alder is indicated for only a portion of the RMZ width, or there is on-site evidence that the site has historically supported conifer, then use the site class for conifer in the most physiographically similar adjacent soil polygon.
- In Western Washington, if there is no site index information, use the site class for conifer in the most physiographically similar adjacent soil polygon.
- In Eastern Washington, if there is no site index information, assume site class III, unless site specific information indicates otherwise.
- If the soil polygon indicates noncommercial or marginally commercial, then use site class V.

(See WA Forest Practice Rules (WAC 222), Chapter 222-16 for a more complete definition of site class.)
