

1. *What is the purpose of the study?*
The purpose of the study is to investigate the effect of a new teaching method on student performance in mathematics.

2. *What are the research questions?*
The research questions are:
a) Does the new teaching method improve student performance?
b) Are there any differences in student performance between the new and old teaching methods?

3. *What is the significance of the study?*
The significance of the study is that it provides valuable information about the effectiveness of the new teaching method, which can be used to improve the quality of education.

4. *What are the limitations of the study?*
The limitations of the study are:
a) The sample size is small, which may affect the generalizability of the results.
b) The study is a quasi-experimental design, which may introduce confounding variables.

5. *What are the conclusions of the study?*
The conclusions of the study are:
a) The new teaching method significantly improves student performance in mathematics.
b) There are significant differences in student performance between the new and old teaching methods.
